## **DETAILED ACTION**

1. This Office Action is in response to the application filed on 18 September 2006.
2. Claims 1-12 are presented for examination.

### ***Drawings***

3. New corrected drawings in compliance with 37 CFR 1.121(d) are required in this application because the drawings are fuzzy, hard-to-read. Applicant is advised to employ the services of a competent patent draftsperson outside the Office, as the U.S. Patent and Trademark Office no longer prepares new drawings. The corrected drawings are required in reply to the Office action to avoid abandonment of the application. The requirement for corrected drawings will not be held in abeyance.

### ***Specification***

4. The textual portion of the specification is replete with grammatical and idiomatic errors too numerous to mention specifically. The specification should be revised carefully.
5. The applicant should use this period for response to thoroughly and very closely proof read and review the whole of the application for correct correlation between reference numerals in the textual portion of the Specification and Drawings along with any minor spelling errors, general typographical errors, accuracy, assurance of proper use for Trademarks ™, and other legal symbols ®, where required, and clarity of meaning in the Specification, Drawings, and specifically the claims (i.e., provide proper antecedent basis for “the” and “said” within each claim). Minor typographical errors

could render a Patent unenforceable and so the applicant is strongly encouraged to aid in this endeavor. The following are just some examples:

There is a duplication of item number 36.

The item number 36 in the specification in which “Logic” -chip”.

The item number 60 in the specification in which “with the AIORK software it is the first time possible motile phone also turned off which can be had...”

The item number 146 in the specification in which “Tbay: Carrier and go...”.

Appropriate correction is required.

Claim 12 recites the element of “wherein a device with fingerprint-sensor for direct evaluation an for access ...”.

6. The disclosure is objected to under 37 CFR 1.71, as being so incomprehensible as to preclude a reasonable search of the prior art by the examiner. For example, the following items are not understood:

7. Claims 1-12 recite the wide range of features or properties of the AIORK software products, methods and devices. However, the claims lack the clarity in limitations or steps because they attempt to define the method and device in terms of the results which are to be achieved. Therefore, this lacking impossibly gives the ordinary skill in the art to understand the novelty of the claimed invention and to conduct reasonably meaningful search covering the wide range of subject matter for which the protection is sought.

Applicant is required to submit an amendment which clarifies the disclosure so that the examiner may make a proper comparison of the invention with the prior art.

Applicant should be careful not to introduce any new matter into the disclosure (i.e., matter which is not supported by the disclosure as originally filed).

8. A preliminary examination of this application reveals that it includes terminology which is so different from that which is generally accepted in the art to which this invention pertains that a proper search of the prior art cannot be made. For example:

9. The disclosure in this instant application appears impossible to carry out a meaningful search covering the wide range of subject matter for which the protection is sought. The description in the specification related to a series of alternative requirements in the form of desirable features or properties seems to cover the AIORK software in different applications and does not show what steps or limitations to each of those different applications. Its implementation seems to be left to the reader entirely. It is so unclear to what extent the instant application discloses the technical problem and its solution.

Applicant is required to provide a clarification of these matters or correlation with art-accepted terminology so that a proper comparison with the prior art can be made. Applicant should be careful not to introduce any new matter into the disclosure (i.e., matter which is not supported by the disclosure as originally filed).

A shortened statutory period for reply to this action is set to expire ONE MONTH or THIRTY DAYS, whichever is longer, from the mailing date of this letter.
